

FOR IMMEDIATE RELEASE

Apple features Capture One for reveal of groundbreaking changes to iPhone photography at September 12 "Wonderlust" event

COPENHAGEN, 12.09.23

In collaboration with Apple's September 12 "Wonderlust" event, Capture One, the leader in professional photography software, has announced its latest app update for iPhone users: Capture One 2.1 on iPhone. Featured during Apple's live iPhone reveal event, this update is set to transform mobile photography, letting both new and aspiring professionals take advantage of the full potential of the iPhone's exceptional camera system with even higher image and color quality.

With Capture One 2.1 on iPhone, photographers can shoot, edit, and create incredible images with their iPhone just as they would with any other professional camera thanks to Capture One's industry-leading tethered shooting speeds and renowned ProStandard color profiles.

The update introduces:

- In-app camera functionality for the Capture One iOS app on iPhone.
- Professional tethering capabilities from iPhone to Capture One Pro, made even more seamless with the iPhone 15's USB-C port.
- ProStandard conversion for iPhone Pro RAW shots, guaranteeing unmatched color accuracy.

"We've excitedly followed the development of iPhone camera systems year after year. They paint a promising vision for the future of photography where hardware and software work together seamlessly to bring the photographer's vision to life," said Rafael Orta, CEO of Capture One.

"Today, we're delighted to take a major step towards our vision of empowering photographers.

For the first time ever, iPhone photographers can enjoy the same tethering experience and RAW image conversion that the pros behind our favorite brands, studios, and publications rely on every day. This is a groundbreaking moment for all photographers ready to incorporate the iPhone into their workflow."

Capture One 2.1 on iPhone is compatible with iOS 16 or newer and is optimized for ProRAW photos taken on iPhone Pro/Pro Max 12 or newer models. Tethering with iPhone to Capture One Pro requires MacOS version 16.2.4 or newer.

ABOUT CAPTURE ONE

Born out of a passion for photography, Capture One provides photographers with the tools to collaborate with clients and creatives, achieve the highest quality photography, and bring their visions to life.

Starting out as a RAW image converter for Phase One cameras in 1994, Capture One is now the tool of choice for professional photographers and studios all over the world. It offers the fastest tethered shooting in the industry, an intuitive and efficient workflow, unparalleled image quality with support for almost 600 cameras and over 700 lens profiles, true-to-life color processing, and precise editing and collaborative tools.

Capture One is on a journey to become the most powerful ecosystem of creative and collaborative tools with workflow freedom spanning across desktop, iPad, and iPhone, letting photographers work from anywhere with anyone.
